## 1. Introduction

### 1.1. General

This Procurement Technical specification (PTS) specifies the technical requirements of Glass Fiber Reinforced Plastic (GFRP) panels for Interiors Saloon Interior, to be supplied on semi-High speed (160kmph) 16 cars Trainset (sleeper) built on Vande Bharat platform project.

BEML will carry out all required works and activities as Contractor to the Employer for ICF project, while the subcontractor shall be responsible for all works required in this PTS with regard to GFRP panels and shall be responsible for supporting the BEML activities as contractor for ICF project for developmental contract.

The scope of work includes the manufacturing of panels as per drawings supplied by BEML, tooling, supply of GRPF panels for Vande Bharat sleeper version train. Also, includes all items of work which may be required to meet the performance requirements, reliable and efficient operation of trains and meeting the best international practices even if not specifically mentioned in this PTS.

### 1.2. Train Composition

The 16-car rake formation shall generally be as follows:

DTC + MC + TC + MC2 + MC + TC + MC + NDTC +  
NDTC + MC + TC + MC + MC2 + TC + MC + DTC

Where,

- MC : Motor Coach,
- TC : Trailer Coach,
- DTC : Driving Trailer Coach,
- NDTC : Non-Driving Trailer Coach

### 1.3. Climatic & Environmental Conditions

The car shall operate reliably and safely under the climatic and environmental conditions prevailing in India as shown in below table. Accordingly, the GFRP panels shall be designed to operate with satisfactory performance under the following conditions.

<b>Description</b>	<b>Limiting Values</b>
Atmospheric temperature	Maximum temperature: 50 degree Celsius Maximum touch temperature of metallic surface under the Sun: 75 degree Celsius and in shade: 55 degree Celsius Minimum temperature: - 10 degree Celsius
Humidity	100% saturation during rainy season
Solar radiation	1 kW/m <sup>2</sup>
Altitude	1000 meter above mean sea level
Rain fall	Very heavy and continuous rainfall in certain areas (up to 2500mm during rainy season)
Atmospheric conditions	Extremely dusty and desert terrain in certain areas. The dust concentration in air may reach a high value of 1.6 mg/m <sup>3</sup> . In many iron ore and coal mine areas, the dust concentration is very high affecting the filter and air ventilation system
Coastal area	Humid and salt laden atmosphere. The equipment shall function in accordance with this Specification when subjected continuously to a humid and salt laden atmosphere with maximum pH value as per IEC 60571 sulphate content of 7 mg per litre, maximum concentration of chlorine 6 mg per litres and maximum conductivity of 130 micro Siemens / cm.
Vibration	The vibration and shock levels recorded on various Sub-systems in existing Trains of IR are generally more than the limits given in IEC 61373 particularly at axle box, and traction motor. Accelerations over 50g have been recorded at axle box levels during run. Vibrations during wheel slips are of even higher magnitude. High level of vibrations above 30g have been measured at traction motor on IR's Trains, which increase up to 50g with worn gear-pinion.
Wind speed	High wind speed in certain areas, with wind pressure reaching 216 kg/m <sup>2</sup> as per IS:875-Part 3(2015)
Flood level	The Train shall function in accordance with these Specifications and Standards in the event of flooding up to 203 mm above Rail Level as follows: <ul style="list-style-type: none"><li>• In the event of flooding at any level below Rail Level, the Train shall operate in full compliance with these Specifications and Standards.</li><li>• In the event of flooding at a height between Rail Level and 203 mm above Rail Level, the Train shall operate in full compliance with these</li></ul>

	<p>Specifications and Standards with the exception that it is permissible to restrict the operation of the Train to a maximum of 8 km/h.</p> <p>Allowance is to be made in addition for increase in the height of water level due to the “bow wave” effect of the Train passing through the water.</p>
Flood Proofing of the under slung Equipment	<p>Waterproofing test will be conducted on Traction and Auxiliary Converter by dipping them up to a height equivalent to 650 mm from rail level (under fully wheel worn condition) in stationary water for 12 hours. There should be no water ingress and Converters shall function normal after the test. Traction Motor with gearbox shall be tested for waterproofing as defined in clause 3.4.6.10.1 Other underslung equipment shall have IP protection as mentioned in clause 3.1.9. However, even in case of flood levels more than the mentioned above, the equipment shall not get damaged and it should be possible to rejuvenate the equipment with minor attention without any adverse effect on their performance. Axle box shall be adequately flood proof.</p>

In developing the detailed design, the subcontractor shall acquaint himself and take note of the environmental operating conditions prevailing on IR especially during heavy monsoon, track flooding conditions, saline, humid and dusty atmosphere etc.
